

Do you know someone with Autism?

We learn more each day through the
generous participation of families like you

We are looking for males over the age of 10 who have a diagnosis of Autism or Asperger's Syndrome to participate in brain imaging studies. Our studies use safe, painless techniques of functional neuroimaging to examine how the brain functions. Participants will be involved in simple language, attention, and memory tasks while we monitor brain activity.

All subjects will be compensated for their time.
Parents are provided with a written,
informational report on the results of diagnostic
and neuropsychological testing

Principal Investigator:
Ralph-Axel Mueller, Ph.D.
